

Vector Databases

a deep dive

Guilherme Henriques, Alexandre Salamin, Bastien Schneider

Summary

01

Context

What the project is about

02

Concept

Vector databases explained

03

Comparison

How are vector databases different from normal DB

04

Project

Our project presented with a live demo

01

Context

Context

Vector DB

A way to approach databases
through machine learning

Recommendation

Our use case was a games
recommendation system

02

Concept

Concept

Vector Databases are composed of 2 elements :

Data

Row-collected information stored in any format (music, image, docx, csv, sql...)

Vectors

List of numbers created from the data through machine learning to mathematically represent the data on a graph

Concept

```
{  
  "firstName" : "Jean"  
  "name" : "Del"  
  "age" : 22  
}
```

```
{  
  23, 27,  
  10, 70  
}
```

Concept

Recommendation System

Finding closest elements based on other element

Search System

Finding closest elements based on text query

Image/Video Recognition

Finding closest elements based on img/vid query

All based on scores attributed by the vectors, a way to calculate the distance between them and a model to determine scores

03

Comparison

Comparison

	Vector Database	Traditionnal Database
Model	Store data in vector form	Structured data model (key-values, graph db, rows/columns)
Query	Similarity search algorithms (cosine) Fast regardless of size	Sql or other type Take longer if big database
UseCase	Recommendation, image and video search	Multiple (DW, ERP...)

04

Project

Project

Why Qdrant?

Self deployed

Can be built from scratch and deployed either on premise or through cloud

Editable code

Other vector databases are mostly premade (Pinecode for example) with no access to code

Free to use

Need to pay only for cloud hosting, otherwise completely free

Good documentation

Clear documentation with exemples.
Can quickly be ready to code

Project

Steam Dataset

Dataset with 80'000
videogames

Qdrant

Vector Database system

Python

Simpler programming
language for us

Project
Integration with

**NEUTRON STAR
EXPLORER**

DEMO

What we actually did

**Thank you
for your
attention!**
